

RESHARP/REPAIR PROGRAM

Resharpen, Repair, Coating and Management of Repairable Tooling.

RESHARPEN

Mahar can provide cost savings by resharpening your cutting tools to like new condition. By utilizing a resharpened tool, you can extend the overall life cycle of your tooling, thus reducing the procurement of new tooling to save you money.

COATING

Mahar can utilize the state of the art coating processes on your resharpened tooling to optimize your tool life on your reground tools.

REPAIR

Mahar offers a wide array of repair service to your cutter bodies, fixtures, indexable tool holders, gages, and spindles. Allow us to bring these damaged products to a like new condition to optimize your production costs by eliminating the need to purchase new replacement products.

ON-SITE SUPPORT

Mahar has expert Cutter Grinders and Machine Programmers on staff that can support your regrind/repair process at your facility.

MANAGEMENT

Mahar can manage your tooling floats to ensure that optimal levels of regrind tooling is available to maximize your set up times for on-site regrinding. By managing this, Mahar can save you money by reducing your new tooling spend by introducing new tooling only when your existing regrind tooling has reached its total life cycle.
